New member from Australia , have a question about valve clearance adjustment . My Briggs model no. 350777 . Not very mechanical so bear with me . Manual tells me to set no.1 cylinder at 1/4" past TDC , then set clearance .005" for both intake and inlet valve . Does this mean I set clearance for both valves while piston is at 1/4" past TDC ?Briggs & Stratton Vanguard 570cc V-Twin OHV Vertical Engine. This engine uses the V-Twin 90° OHV design to run cooler, cleaner and more efficiently. The design allows for more HP output with less displacement and less carbon build-up.
