SOIL PROFILE. The ground is modified and enriched by the plants growing on it. Making a section of soil (figure 4), you can observe different layers: a layer rich in organic matter, the humus (O); a layer rich in roots and living organisms (A); a layer less rich in life, but still used by roots (B) and an inert soil (C). The miscarriages of justice of Amanda Knox and Raffaele Sollecito are described. • A knife recovered from a cutlery drawer was purported to be the murder weapon. 1. INTRODUCTION - OVERVIEW - Biology as a science deals with the origin, history, process, and physical characteristics, of plants and animals: it includes botany, and zoology. A study of biology includes the study of the chemical basis of living organisms, DNA. Other related sciences include microbiology and organic chemistry. Non-Science... and nonsense! The history and folklore of the mangosteen are dealt with on another page within this site. The page before you is about the scientific research currently being conducted on the mangosteen, *Garcinia mangostana* L.
