This study sought to compare the non-technical skills of experienced surgeons who completed their training before the introduction of SET with the non-technical skills of more recent trainees. Methods. Surgical trainees and experienced surgeons undertook a simulated scenario designed to challenge their non-technical skills. Surgical trainees and experienced surgeons undertook a simulated scenario designed to challenge their non-technical skills. Scenarios were video recorded and participants were assessed using the Non-Technical Skills for Surgeons (NOTSS) scoring system. Non-Technical Skills for Surgeons (NOTSS) This is a one-day course for consultant surgeons and post-CCT trainees from all surgical specialties. The course examines the non-technical skills which underpin good operative performance using short talks, video simulated scenarios, an audience response voting system, and small group discussions. The courses taken by the largest proportion of respondents, such as ATLS, BSS, and CCrISP, were those that focused on the teaching of technical surgical skills. Many of the other courses done by respondents focused on non-technical aspects of surgery, such as teamwork, communication skills, and leadership, or were appropriate for specialist ... Trainee surgeons and their supervisors used the Non-Technical Skills for Surgeons in Denmark tool to stimulate feedback conversations. Audio recordings of post-operation feedback conversations were collected. Trainees and supervisors provided questionnaire responses on the usefulness and comprehensiveness of the feedback. Clinical review Non-technical skills for surgeons in the operating room: A review of the literature. S. Yule, PhD, aR. Flin, PhD, S. Paterson-Brown, FRCS, b and N. Maran, FRCA, c Aberdeen and Edinburgh, Scotland. Background. This review examines the surgical and psychological literature on surgeons' intraoperative non-technical skills. Surgical Boot Camps can enhance a trainees technical skills and confidence. • Trainees can develop skills in specialties where they have limited experience but will manage in their clinical role. • Boot Camps offer a timely opportunity to improve non-technical skills that can impact on patient safety. This study has demonstrated the face validity or realism of a novel training and assessment environment for surgical trainees, which integrates technical skills with other skills crucial for effective performance during a surgical crisis simulation. For the surgical resident, skills not often taught in medical school, become essential in coping and effectively managing the many demands of the operating room, the surgical ward and the emergency care setting. The present paper reviews the literature on non-technical skills as it relates to surgery.
