

# Download Minimal Invasive Dentistry

Story at-a-glance -. Early intervention with minimally invasive dentistry can eliminate 80 percent of future dental interventions on the vast majority of patients. By identifying hypocalcific areas and using a miniature air abrasion tip to clean out those pits, fissures and grooves, removes the initial decay. We offer minimally invasive dentistry's most advanced technology, including: Air abrasion — removing decay without the drill. Onlays — instead of crowns, leaving your original tooth structure in place. Intra-Oral camera — for the best documentation. Oral cancer detection. Dental ozone. Sealants — protecting teeth from bacteria. The Disturbing Trend of Minimally Invasive Dentistry. Minimally invasive dentistry gives people the false impression that they are choosing something healthy for their teeth by having small amounts of tooth structure removed, and that the dentist doing small treatments and fillings is providing a great holistic service to people. Of course... Minimally Invasive Dentistry n. The dentist at Midtown Dentistry are a big believer in minimal invasive dentistry. The thing that makes the concept of minimally invasive dentistry so different is the very aim it is based on which is to preserve as much of the healthy tooth structure as possible. This form of dentistry lays emphasis on...
